Security @ Siemens

Customized Solutions. Optimal Security. Maximum Impact.

Need complete infrastructure security?

Security drives deep into your organization. It's a fundamental infrastructure need to ensure business continuity. As the scope of responsibilities required to maintain a secure infrastructure broadens rapidly, organizations must address complex issues such as:

- Insurance and liability
- Data and information security
- Asset protection and theft
- Workplace violence

We do it.

We secure your infrastructure through our comprehensive approach to providing solutions, answering the security questions you face every day. Our detailed process defines the precise security requirements of your organization. We apply customized, flexible solutions which mitigate risk and offer future relevance.

Need tomorrow's answer today?

The need for more complex security solutions is elevated by business requirements, standards and regulations, and anticipated security threats. In addition to driving the day-to-day business and navigating budget constraints, organizations are faced with planning for future security measures and implementing those solutions today.

We deliver it.

As the largest security systems integrator in the U.S., we deliver complete solutions that provide answers to complex security concerns, meeting the dynamic needs of your business. We secure your infrastructure leveraging our powerful product portfolio and best-in-class technologies in:

- Barrier Systems
- Biometric Verification Technologies
- Closed Circuit Surveillance Systems
- Command & Control Systems
- Credential Management Systems
- Custom Software Development & Integration
- Digital Video Recording & Retrieval Systems
- Digital Video Transmission Systems
- Electronic Access Control Systems
- Electronic Asset Tracking & Protection Systems
- Electronic Locks & Keys
- Elevator Control
- Extreme Conditions Surveillance Systems
- Fiber Optic Security Transmission Networks
- Intercom & Emergency Communications Systems
- Intrusion Detection Systems
- Network Security Applications
- Perimeter Protection Systems
- Photo ID Badging Systems
- Rules-based Intelligent Video Analysis
- Screening & Detecting Systems
- Visitor Management Systems

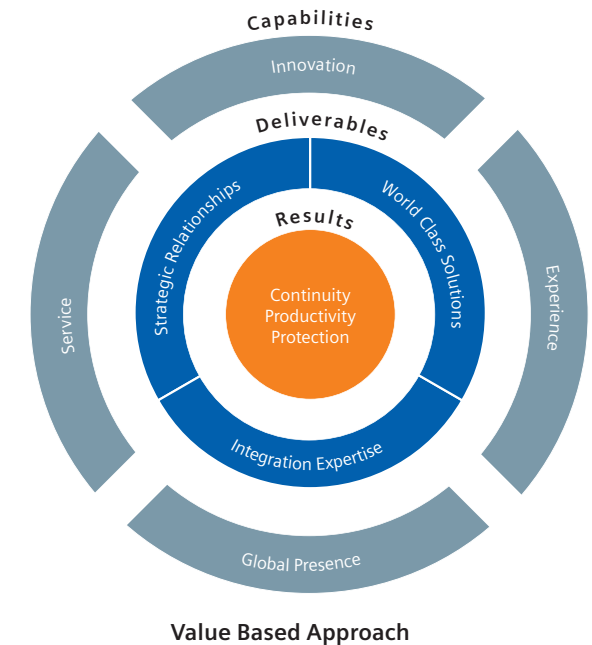

How will you manage it all?

Increased productivity, return on investment, enhanced work environment. Security systems need to deliver measurable results. At the same time, protection must be balanced with accessibility. Advanced security technologies must provide user-friendly operation, and the system must respond with efficiency and agility, offering immediate impact.

We make it happen.

Siemens Building Technologies brings value through our broad range of competencies. We leverage our heritage of innovation and our global presence, applied through local response, industry knowledge and experience, and unmatched service capabilities. Through strategic relationships with our clients, we integrate world class security solutions that ensure their business continuity, productivity and protection.

We secure it.

As the leading security systems integrator, Siemens Building Technologies delivers solutions that let you focus on your business while we secure it. We assess, install, integrate and service security solutions that ensure business continuity and protect your people, property and assets. The result is a safe, secure environment, a positive impact to your bottom line, and maximum peace of mind for your organization. You focus on your core business. We'll secure it.
